## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1, 8 & 12, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

With further regard to claim(s) 1, 8 & 12, there are numerous limitation(s) that lack(s) antecedent basis; for example, the rims. Also, while the applicant terms such as a discharge device, there is no structural feature(s) reflecting this. As such, it is unclear if the applicant is attempting to claim an agitation device. The examiner suggests after "discharge device", inserting --for pneumatically discharging said particulate matter--.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5, 8-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Walters (4,413,758).

Walters (4,413,758) disclose(s):

- A vessel 10;
- A discharge device 25;
- A converging outer shell 26;
- A permeable converging inner shell 30;
- first flange 13;
- second flange 29;
- ring 32, Figure(s) 4;
- element for matching 33;
- third flange 38;
- lower inner shell portion 30;
- stuffing box, lower wedge portion of lower 33;
- injection inlet 37.

Note, as the inner shell is a fabric it is attached to the ring 32 only in a woven manner. Further, Walters (4,413,758) is/are silent on flange selection and therefore employs standardized flanges, i.e. those that the applicant is acknowledging is old.

5. Claims 1, 3, 7, 12-13, 15 & 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Anderson (3,254,766).

Anderson (3,254,766) disclose(s), Figure(s) 2;

- A vessel 10;
- A discharge device 12;
- A converging outer shell 13;

- A permeable converging inner shell 15;
- first flange at 11;
- second flange 11;
- ring 16;
- injection inlet 58.

### ***Conclusion***

6. Claim 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph A. Dillon, Jr. whose telephone number is (571)272-6913. The examiner can normally be reached on 8-5:30, every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Crawford can be reached on (571)272-6911. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
